OBJECTIVE

I aim to grow as a skilled software engineer and expand my knowledge in modern technologies and practices.I am also eager to contribute my problem solving abilities, technical knowledge and collaborative mindset to contribute to high quality solutions that will drive the companies success

EXPERIENCE

20/05/23 -  
21/12/2023

- **Data Capturer**  
Nova Connect  
I worked as a data captured using MS excel as my tool to capture details of potential clients who might be interested in company products

EDUCATION

2019

- **The Hill High school**  
Matric  
Diploma

2024

- **Rosebank College**  
Diploma in Software Development  
Nqf6

SKILLS

- I have strong skills in C-Sharp(C#) and integrating it with xaml and .net maui. With these frameworks I leverage them to create responsive, native like UIs.
- I also possess ASP.NET, MVC, Web development knowledge of both the front end and backend using c# dominantly in my backend while making use of restful API'S to connect to my database
- I have experience using MySql to design and implement backend databases for websites, ensuring efficient data storage and retrieval. I am able to create normalized database schemas to ensure clean data entry and retrieval and establish secure connections between the database and web application.
- I have developed secure login forms for websites using PHP leveraging myphpadmin. Also I have experience with integrating PHP with HTML/CSS for dynamic data driven interfaces
- I am proficient in HTML5 using it to develop well structured and responsive web applications
- I am also able to integrate CSS along with HTML to create fully responsive web applications. I am also familiar with using CSS tools like tailwind to help make the designing process fluid.
- I am also able to utilize Javascript with frameworks such as react to develop responsive web applications that focus on ux design and performance
- I have technical experience of using MS Office in the work environment and personal use to enhance productivity and documentation.
- I also possess technical computer skills working with physical components and I am currently working towards my N+ certification
- I learned Java in tertiary where I gained an understanding for Object Oriented Programming(OOP) principles such as classes, inheritance,polymorphism and encapsulation

PROJECTS

- **MERN Stack e-commerce website**  
I have been able to utilize MongoDB, Express JS, React with vite and node js with various packages such as jsonwebtoken to create a fully responsive ecommerce web application
- **ASP.NET car rental website**

I have utilized ASP.NET MVC and entity framework to develop a fully functional and responsive car rental website where users can browse, search and book vehicles. This website also features an admin panel where administrators can manage bookings, vehicle availability and customer details.

- **ASP.NET Live Cryptocurrency tracker**

I have made a real-time cryptocurrency market tracking web application using ASP.NET, MVC and entity framework with an integration of a 3rd party financial party API from coinMarketCap to fetch and display live pricing and 24 hour data changes. This web app also utilizes data caching to reduce api calls and improve performance.
